**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-31, drawn to an optical switch, classified in class 385, subclass 18.
  - II. Claims 32-38, drawn to an optical switch device, classified in class 385, subclass 16.
2. The inventions are distinct, each from the other because of the following reasons:
3. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because any optical switch with a moveable section may be used in an optical switching device as long as it is possible that the optical switch may be responsive to a control condition. It is not necessary that the optical switch to have the structures described in Group I. The subcombination has separate utility such as use with any system requiring switching from input ports to output ports. Such systems may or may not have monitoring and operational control sections.
